Professional Summary

Full-stack developer with a strong foundation in Python and TypeScript. Built and deployed ProofChain, an MCA capstone project combining blockchain-based evidence management with AI-powered tamper detection. Gained real-world experience shipping features for a live multi-tenant SaaS platform during a full-stack internship. Seeking a Software Developer role where I can build reliable products and grow as an engineer.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL

Frontend: Next.js 14, React, HTML, CSS, Tailwind CSS

Backend: FastAPI, REST APIs, JWT Authentication

Database: MongoDB

Mobile: Flutter (Android)

Tools: Git, GitHub, Docker, Vercel, VS Code, Ubuntu

Experience

Full Stack Developer Intern — Growify India

Apr 2026 – Jun 2026 • Remote

- Built a geofence-based teacher attendance system — admin configures college coordinates and the system validates the teacher's live location before allowing attendance to be marked, preventing off-campus misuse.
- Developed role-based dashboards for Teacher, Student, Parent, and Admin — each surfacing real-time data relevant to that role via live API integration.
- Implemented PDF and Excel report generation for attendance and academic data, giving administrators exportable records directly from the platform.

Projects

ProofChain — Digital Evidence Management Platform

proofchain-web.vercel.app • [GitHub](#)

Next.js 14 • FastAPI • Python • MongoDB • Gemini Vision API • Polygon Amoy Testnet • IPFS

- Designed and built a full-stack platform for secure digital evidence management — evidence is recorded on a blockchain smart contract creating a tamper-proof, permanent chain-of-custody audit trail.
- Built an AI-powered tamper detection service using Gemini Vision API and ExifTool — analyses uploaded files for metadata anomalies and visual inconsistencies, producing a risk score from 0 to 100.
- Implemented role-based access control with three user roles (Investigator, Analyst, Admin), JWT authentication, bcrypt password hashing, account lockout, and email verification.
- Resolved cross-environment deployment conflicts between the FastAPI microservice on Render and the Next.js frontend on Vercel, achieving a stable production deployment.

CodSach Student Hub — Academic Resource Platform

codsach.vercel.app • [GitHub](#)

Next.js • GitHub API • Flutter

- Built a web platform for MCA students to access academic resources including lab programs, study notes, and question papers — deployed and publicly accessible.
- Developed a companion Android app using Flutter; used GitHub API as a content management backend for resource storage and versioning.

Certifications

Introduction to Linux (LFS101) — The Linux Foundation

2026

Education

Master of Computer Applications (MCA)

2024 – 2026 • CGPA: 8.22

St. Philomena's College (Autonomous), University of Mysore

Bachelor of Computer Applications (BCA)

2021 – 2024 • CGPA: 7.68

JSS College of Arts, Commerce & Science, University of Mysore
